Names: SOLUTION___

1. Correct the errors in the code below.

```
public class Bugs {
    /*
     * There are 4 errors for you to find in this method.
     * This method prints stuff and do not return any value.
    public static void something(int num, String val) {
        System.out.println("My name is: "+ val );
        int num2 = 20;
        double num3 = num + num2 * 0.1;
        System.out.println("Your number is: " + num3);
    }
     * Method returns true if num is odd.
     * Method has 2 errors.
    public static boolean odd(int num) {
       return num%2 != 0;
     * This is where your program actually runs everything
     * Method has 4 errors.
    public static void main(String[] args) {
        something(3, "Ada");
        System.out.println(odd(5));
        System.out.println("Done!");
}
```
