Names:

_____

1. Correct the errors in the code below.

```java
public class Bugs {
    /*
     * There are 4 errors for you to find in this method.
     * This method prints stuff and do not return any value.
     */
    public static void something(int num, String val)
        System.out.println("My name is: " val);
        20 = int num2;
        double num3 = num + num2 * 0.1;
        System.out.println("Your number is: " + num3)
    }

    /*
     *
     * Method returns true if num is odd.
     * Method has 2 errors.
     */
    public static void odd(int num){
        return num/2 != 0;
    }

    /*
     * This is where your program actually runs everything
     * Method has 4 errors.
     */
    public static void main(String args){
        something(3, "Ada);
        System.out.println(odd());
        println("Done!");
    }
}
```
